

Environmental History Research Project

The environmental movement has been around for decades! The actions and policies that we see now have all be shaped by years of **advocacy**, **campaigning** and **research**. Throughout this time, there have been a number of events that have been especially significant within the movement, for good and bad reasons. Below are just a few of the major events of the environmental movement so far.

Your task is to research **one** of these events and produce **an A4 comic strip** illustrating what happened.

Things you should consider:

- ·When did the event happen?
- ·Who was involved? Who was affected?
- ·Why did it happen?
- ·Where did the event take place?
- ·How did it impact the climate movement?

-
- ·Apollo 8 astronauts take the first photograph of 'Earthrise'
 - ·The first Earth Day
 - ·The Paris Agreement goes into effect
 - ·Deepwater Horizon oil spill
 - ·'Silent Spring' by Rachel Carson is published
 - ·James Hansen testifies to the US congress about climate change
 - ·The Chipko movement is originated
 - ·Pope Francis publishes 'Laudato Si'
 - ·The hole in the ozone is discovered
 - ·Eunice Newton Foote suggests that carbon dioxide affects Earth's temperature
